

Eat for
Good

Marquee HTML

HTML <marquee> Tag

It is a non-standard HTML element. To scroll an image or text horizontally, the HTML <marquee> tag is used. The scroll can be either vertically, thus allowing the image or text to be scrolled left or right automatically. With a comparison to the blink element, this tag was introduced in Microsoft's Internet Explorer earlier versions.

The advertisement features the Knorr logo at the top left. In the center, the text "Eat for Good" is displayed in large green letters. Below this, there are images of Knorr cube soup packages and a bowl of prepared soup. At the bottom left, it says "AVAILABLE ON JUMIA". On the right side, there is a "SHOP NOW" button and the text "AVAILABLE ON JUMIA". The background has a faint, repeating pattern of the Knorr logo and the words "EAT FOR GOOD".

Map HTML

```
<!DOCTYPE html>
<html>
<body>
<marquee>Hello World!!</marquee>
</body>
</html>
```

Output:

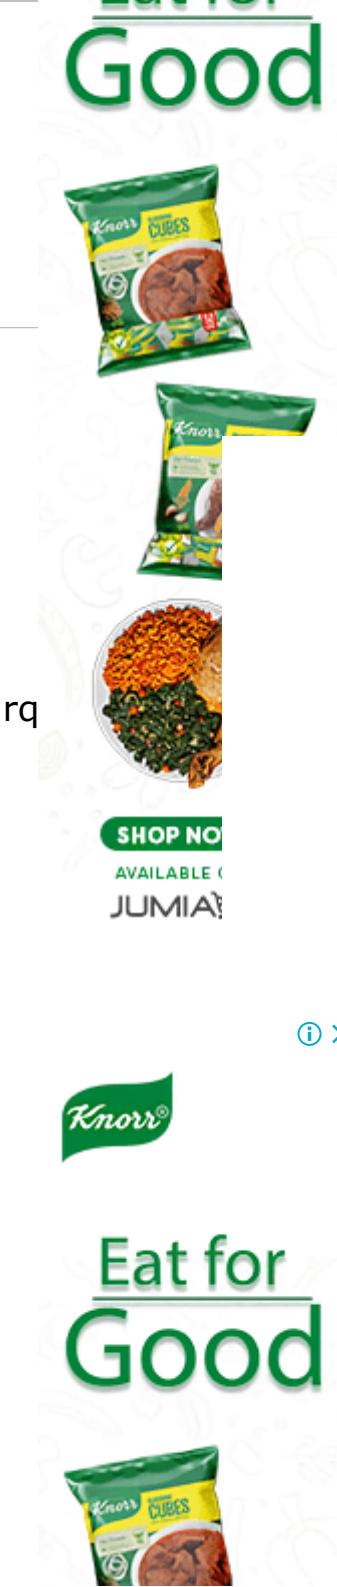

Hello World!!

Explanation:

In the above example, we have used the HTML <marq scroll the text horizontally.

Supporting Browsers:

Chrome, IE, Firefox, Opera and Safari.

Good**

Specific Attributes:

Attribute	Uses
behavior	To set the behavior of the marquee to either scroll, slide or alternate types.
direction	To specify the direction (left, right, up or down) of scrolling content.
width	To specify the width of the marquee in pixels.
height	To specify the height of the marquee in pixels.
hspace	To specify the horizontal space in pixels around the marquee.
vspace	To specify the vertical space in pixels around the marquee.
scrollDelay	To specify the scroll delay in seconds.
scrollAmount	To specify the scroll amount in number.
loop	To specify the loop for marquee content in number.
color	To specify the background color, but is deprecated now.

Ad youtube.com

.....L Scroll Marquee:

By default, the scroll property exists with the HTML <marquee> tag. It allows the text to be scrolled from right to left. The scroll will reach the end of the left side, it restarts at the right side of the marquee. The text then disappears, when the loop completes.

Example:

```
<!DOCTYPE html>
<html>
<body>
<marquee width="50%" behavior="scroll" bgcolor="crimson">
Hello World!!
</marquee>
</body>
</html>
```

Output:

Hello World!!

Explanation:

In the above example, we have used the HTML Scroll Marquee, to scroll the text from right to left.

HTML Slide Marquee:

To scroll the contents to slide the entire length of the marquee, the HTML Slide Marquee can be used. To display the content permanently, it stops at the end.

Example:

```
<!DOCTYPE html>
<html>
<body>
<marquee width="50%" behavior="slide" bgcolor="crimson">
Hello World!!
</marquee>
</body>
</html>
```

Output:

Hello World!!

Explanation:

In the above example, we have used the HTML Slide Marquee, to scroll the text to slide the entire marquee length, but to stop at the end.

HTML Alternate Marquee:

To scroll the content from right to left and then to go back left to right, the HTML Alternate Marquee is used.

Example:

```
<!DOCTYPE html>
<html>
<body>
<marquee width="50%" behavior="alternate" bgcolor="crimson">
Hello World!!
</marquee>
</body>
</html>
```

Output:

Hello World!!

Explanation:

In the above example, we have used the HTML Alternate Marquee, to scroll the text from right to left and then from left to right.

Direction in HTML marquee:

We can also change the direction of the scrolling text, where the direction can be left, right, up and down.

Example:

```
<!DOCTYPE html>
<html>
<body>
<marquee width="50%" direction="right" bgcolor="crimson">
Hello World!!
</marquee>
</body>
</html>
```

Output:

Hello World!!

Explanation:

In the above example, we have used the direction attribute of the HTML Marquee, to scroll the text in the specified direction.

Nested marquee:

Example:

```
<!DOCTYPE html>
<html>
<body>
<marquee width="300px" height="50px" behavior="alternate" style="border: 2px solid red; background-color: yellow; color: black; font-weight: bold;">HELLO WORLD!!
</body>
</html>
```

Output:

HELLO WORLD!!

Explanation:

In the above example, we have used the HTML `<marquee>` tag inside the HTML `<marquee>` tag to create an HTML nested marquee.

Disadvantages of HTML marquee:

- Because of the continuous attraction towards movement and marquee text constantly, the marquee can be distracting sometimes.
- It is also very difficult to click the static text since Marquee text moves.
- The text is harder to read.
